- When input speed is not shown in the table, find it by the interpolation method.
- When input speed (N) is lower than 750 r/min, find the mechanical power rating (Pn) according to the following formula. $P_n = P_n(750) \times N/750$
- Please consult us when input speed is over 1800 r/min.
- The values Pt are applicable to continuous operation at ambient temperatures of 20°C (68°F) or less.
- Recommended Service Factor for Extruder is 1.25 or over and applies for electric motor as prime mover.

- Thermal power rating should be checked by the following method.
ex.) Specifications Motor: 20 HP, Input speed: 1500r/min, Size of Gearbox: SEC005,
Nominal reduction ratio: 12.5
Ambient temperature: 40°C (104°F). Temperature correction factor Ta = 0.70
(See the following table1)
Thermal power rating Pt = Pt x Ta = 32 x 0.70 = 22.4 > 20HP.
- Ratios with * are optional.

- When input speed is not shown in the table, find it by the interpolation method.
- When input speed (N) is lower than 750 r/min, find the mechanical power rating (P_n) according to the following formula. $P_n = P_n(750) \times N/750$
- Please consult us when input speed is over 1800 r/min.
- The values P_t are applicable to continuous operation at ambient temperatures of 20°C (68°F) or less.
- Recommended Service Factor for Extruder is 1.25 or over and applies for electric motor as prime mover.

- Thermal power rating should be checked by the following method.
ex.) Specifications Motor: 15kW, Input speed: 1500r/min, Size of Gearbox: SEC005,
Nominal reduction ratio: 12.5
Ambient temperature: 40°C (104°F). Temperature correction factor Ta = 0.70
(See the following table1)
Thermal power rating Pt = Pt x Ta = 24 x 0.70 = 16.8kW > 15kW.
- Ratio with * are optional.

Rating Table (continued)

kW

Nominal Ratio	Input Speed r/min	Output Speed r/min	Size							
			005		010		020		030	
			Pn	Pt	Pn	Pt	Pn	Pt	Pn	Pt
